Q: If  $L(\alpha, \beta)$  is a composition of linear subspaces  $L_1 \subset L_2 \subset L_3 \subset \dots$  where  $L(\alpha, \beta)$  is closed, and each  $L_i$  is closed, how to show  $L(\alpha, \beta)$  is closed? Let  $\alpha, \beta \in \mathbb{R}^n$ , and let  $L(\alpha, \beta) = \{w \in \mathbb{R}^n : \text{there exists } k \in \mathbb{N} \text{ such that } w \in \alpha + L_k \text{ and } w \in \beta + L_k\}$  where  $L_1 \subset L_2 \subset L_3 \subset \dots$  are subspaces such that Each  $L_i$  is closed, and  $L(\alpha, \beta) = \bigcap_{k=1}^{\infty} L(\alpha, \beta) \cap L_k$ . If I can show that  $L(\alpha, \beta)$  is closed, it will imply that  $L(\alpha, \beta) \subset \bigcup_{i=1}^{\infty} L_i$  implies  $L(\alpha, \beta) \subset L_i \subset L(\alpha, \beta)$ , and  $L(\alpha, \beta) \supset \bigcup_{i=1}^{\infty} L_i = L(\alpha, \beta)$ . For 1. I want to use this: If  $f$  is continuous, then  $f^n$  is sequentially continuous for all  $n \in \mathbb{N}$ . If each  $L_i$  is closed, then  $L_k$  is closed for every  $k$ . However, I cannot prove that  $L(\alpha, \beta)$  is closed from the above. I'm not sure if sequential continuity holds for a concrete composition of sets. If sequential continuity is not true, is there another approach? If sequential continuity is true, how to show it? I think this is related to proving compactness of  $L$
