In 2017, AutoCAD's sales exceeded one billion dollars, more than any other single product in the company's history. History The origins of AutoCAD go back to March 1982, when Ray Duncan, a former engineer at Xerox, was given the task of creating a new drafting program for the Apple II. He called the new program AutoCAD after the first two letters of "Automatic" and "CAD", meaning "computer-aided design" in English and "Computer Assisted Design" in French. The first version of AutoCAD, called AutoCAD 1, was available to the public on December 10, 1982. It was one of the first programs that used real-time 3D rendering with full support for both vector and bitmap graphics, which set it apart from its counterparts. AutoCAD 1 used Apple II's EGA graphics and a proprietary three-dimensional (3D) renderer to create drawings and was priced at \$1,750 (\$1,664 in 2011 dollars). AutoCAD 1 was not designed for corporate use; it was meant to be used at home and in hobbyist-level organizations. It was released as a stand-alone app, for use with no other Apple II products, and was originally distributed on floppy disks. Later that year, AutoCAD 1 became available for the first time in a box that included a keyboard, which raised its price to \$3,500 (\$3,735 in 2011 dollars). A few months after AutoCAD 1 was released, Duncan left Apple and left the company to start his own company, Synergistics, Inc. Duncan sold the rights to AutoCAD to Autodesk for \$1 million in 1983. The company released AutoCAD 2 in 1983, a Mac OS version that had better support for bitmap graphics. One of the Mac OS versions came with a software disc that was compatible with the LaserWriter, a page-layout product at the time, and therefore was able to print two-page spread sheets. In January 1984, the 3D version of AutoCAD was released, marking the first commercial product to feature full support for both vector graphics and bitmap graphics. The same year, the minimum system requirement was changed from Apple IIgs to Apple IIe. The first version of AutoCAD was available in a box, which included a 16 MHz 68000 microprocessor and 256K of memory,

AutoCAD 2022 Crack Architecture, AutoCAD Electrical and AutoCAD Civil 3D are application programming interfaces (API) that enable users to call methods on the product to perform operations such as: modify shape parameters, such as modifying the size of the arc of a curve to fit a specified tolerance in a drawing, or freeze a group of objects. The API can be accessed by using an API key. ObjectARX is an API for Automation. It is a collection of classes, procedures, and functions that allow application developers to extend AutoCAD, by coding their own applications. This is done by creating a client application, which contains a class library and .NET (Microsoft) components. The code can then be sent to Autodesk to be built into a DLL and then loaded into AutoCAD. AutoCAD supports scripting in different languages, both AutoLISP and Visual LISP (Visual Works LISP) were available for version 2 through 2011, Visual LISP was deprecated in 2011, but AutoLISP remains as of version 2020. AutoCAD also supports the ObjectARX API for application development with Visual Studio, the .NET programming language. AutoCAD has a number of APIs, the following are listed in order of release: AutoLISP: Released in 1991, was the scripting language for AutoCAD 2 and subsequent releases until 2007. The scripting language was written in AutoLISP, an extension of the LISP programming language. Visual LISP: Introduced in 1995 with AutoCAD 4, it allowed for creating programs and scripts in Visual LISP, a variant of the LISP programming language. The language was included with AutoCAD 4, AutoCAD R14 (2006), AutoCAD LT 2007, AutoCAD 2009, and AutoCAD 2010. VBA: Introduced in AutoCAD 2000, it was a variant

of Visual Basic for Applications (VBA) programming language. .NET: Introduced in AutoCAD R13 (2007), allows for developing AutoCAD extensions through Visual Studio, this is available for AutoCAD 2010, AutoCAD LT 2011, AutoCAD 2012, AutoCAD 2013, AutoCAD 2014, AutoCAD 2015, AutoCAD 2016, AutoCAD 2017, AutoCAD 2018, AutoCAD 2019, AutoCAD 2020. The present invention relates to a programmable logic array and, more particularly, to a programmable logic array suitable for driving a programmable array logic having a high-speed operation at a low voltage. To form a programmable logic array, a large number of circuits of the same kind are connected together in parallel by, for example, a cross point cell. When the logic state of a cross point cell has to be discriminated, a programmable logic array generally outputs a discrimination signal. The discrimination signal is a binary signal "1" or "0" which is output from the cross point cell. If the discrimination signal "1" is output from the cross point cell, then the cross point cell is turned on. If the discrimination signal "0" is output from the cross point cell, then the cross point cell is turned off. Here, the cross point cell is designed to output a discrimination signal "1" or "0" when the electric potential of one of the bit lines connected to the cross point cell is changed. The electric potential of one of the bit lines is changed by a voltage applied to the other one of the bit lines through a sense amplifier. To provide a sense amplifier with a high-speed operation, it is necessary to supply a potential higher than a power supply voltage  $V_{sub}$  of a semiconductor circuit to the sense amplifier, and it is also necessary to provide a potential lower than the power supply voltage  $V_{sub}$  of the semiconductor circuit to the sense amplifier. Since the potential higher than the power supply voltage  $V_{sub}$  is supplied to the sense amplifier, however, the driving capability of the sense amplifier becomes too high to output a discrimination signal. If the potential of the output signal is controlled, the potential of the sense amplifier becomes higher or lower than the power supply voltage  $V_{sub}$  of the semiconductor circuit. Therefore, there arises a problem in that a large current flows
