Internet Access Monitor For MS ISA Server License Code & Keygen X64

Get a full overview of your network by customizing and viewing hundreds of reports for traffic, hosts, applications, services, computer users and countries. What is the usage of the computers in your network? Monitor traffic including data transfers, websites accessed, windows opened and more. What are the users doing on your network?... Wise Net - WISE Net Security Network Control Tools from 3S Software 4.5 Free Overview: Wise Net is a complex security suite which comes with a bunch of tools to protect your privacy. It has a browser extension to track your online behavior, an application to monitor web traffic, a spyware remover to identify and remove harmful malware, and a utility to hide your online activities. Wise Net doesn't bother you with options and wizards, it offers a simplified interface with a plain design and easy-to-use features. All these combined make it suitable for a beginner. Keep in mind that this software cannot cover your entire browser history. It only logs the most recent 10 pages you visited online, new tabs, applications you used and the data sent to them. Wise Net can be started by adding the extension to your browser. Once it's installed, it doesn't reveal itself. Its icon appears on your browser as a small button on the right edge. It will collect your browsing history and send it to WISE Net servers. The program works as a one-time password to log into the most popular websites, with many of them being Gmail, Facebook, Twitter, Amazon, eBay, Vkontakte, Google, etc. You can also use Wise Net to check the real IP address of a webpage or set a cookie to track someone who uses the same browser as you. If that happens, you'll be able to see the visitor's information on a website's URL bar. Wise Net also remembers cookies for websites, which means that after the first use, it will remember the list of the website's cookies and show them in its interface. You can use it to see the checkbox on a website's login form. The application doesn't show itself when opened. It's kept hidden in the system tray. If you click the menu button of the program's icon, you will see a new tab of the settings, where you can change the settings that make Wise Net work. It won't send any information about your web browsing via online. The only thing it does is to log your system

What's New In?

With the help of Internet Access Monitor for MS ISA Server you can keep track of your employees' Internet usage time within a corporate network. It logs website navigation and image downloads, among others. This is an advanced application that permits you to compile detailed reports for each computer user, which includes charts, a list of visited websites, and the overall bandwidth traffic consumption. Initial configuration Wrapped up in a pro-grade interface with a neatly organized structure, the tool lets you use a first run wizard to configure general settings regarding the reports style (flat or hierarchical) and data sources (with exclusion rules for hosts, client IP addresses, result codes, and object sources). Examine, filter and export log details Log information includes the date and time, address, data source, service, IP address, user name, protocol, content type, host category, application, object source and country, along with the total received and sent packets for each event. It's possible to filter data by data range, address and traffic, change the field values, hide any columns from display, open a specific site in the web browser, as well as put together reports with the traffic overview, incoming, outgoing and total traffic, requests and percentage. Built reports and configure app preferences Reports can be organized by data sources, users, workgroups, IP addresses services, protocols, content types, host categories, countries, months, dates, weekdays or hours. Plus, you can inspect chats, use a basic search function, send data via email or export it to file, convert IP addresses, clean up or restore the database, as well as import log files. Numerous settings can be configured for Internet Access Monitor for MS ISA Server. For example, you can modify the default path to the database directory, customize the UI color scheme, limit the number of records to keep, hide the grid from charts, enable log files management, or schedule tasks and automatic email notifications. Evaluation and conclusion The software utility worked well in our tests, without hanging, crashing or showing errors. It used low CPU and RAM, so it didn't hamper system

performance. Although it hasn't been updated for a long time, Internet Access Monitor for MS ISA Server comes packed with rich features for monitoring online activities within a local network.
